ADA PRESIDENT BRANDJORD TO ATTEND ANNUAL MEETING

Brad Neville, DDS

Although it seems like the new year has only just begun, the time of our annual meeting is fast approaching. So if you have not yet registered and made your room reservations, now is the time to do so! I am excited that we have selected San Antonio as our meeting site for 2006. The Hyatt Regency is situated right on the famous River Walk with all of its great shopping and restaurants. And for you more “seasoned” Academy members, I can guarantee that we will have much better accommodations than we experienced the last time we came to San Antonio back in 1980.

This year’s meeting promises to be exciting for another reason: ADA President Dr. Robert Brandjord has graciously accepted our invitation to attend the meeting, and he will address the Academy. As the Academy attempts to play a more active role in organized dentistry, his visit represents a wonderful opportunity for us to put our best foot forward. President Brandjord is a practicing oral surgeon who has had close ties with oral pathology. Many thanks to Mike Rohrer for his help in arranging for Dr. Brandjord’s visit. After Dr. Brandjord’s presentation, our traditional Welcoming Reception will be held in his honor.

As we go to press, the Executive Council and the Professional and Public Relations Committee are working on another positive development for our annual meeting. The National Student Research Group (NSRG) of the American Association for Dental Research has asked us to support undergraduate dental students conducting research in the field of oral and maxillofacial pathology by providing them with the opportunity to present abstracts at our annual meeting. This sounds like an outstanding idea, especially as we try to attract the best and brightest students to enter our specialty. Therefore, we are working with NSRG on a plan to provide some financial support each year for deserving students to attend our meetings and present their research.

In closing, I want to offer congratulations to two of our Academy members for their recent outstanding accomplishments. Dr. Cathy Flaitz, who currently serves as Dean of the University of Texas Dental Branch in Houston, was recently named the 2005 Texas Dentist of the Year by the Texas Academy of General Dentistry. She is the first woman to win this prestigious award in the organization’s 41-year history. Congratulations also go to Dr. Larry Goldblatt, who currently serves as Dean of the Indiana University School of Dentistry. Larry has recently been nominated for the office of President-Elect of the American Dental Education Association (ADEA). This nomination is a great honor and the Academy wishes Larry the best of luck in the upcoming election.

See you in San Antonio!

Brad Neville
ABOUT SAN ANTONIO, TEXAS

Come stroll along the 2 1/2 miles long San Antonio River walk, bordered by restaurants, shops and galleries. There are many festivals and special events on the River Walk all year round. Other great places to see include the Alamo, Sea World of Texas, Six Flags of Texas, Tower of the Americas, King William Historic District, and many more museums and cultural events. A great time to combine with a family vacation. Room rates begin at $169 for single/double and $179 for triple/quad.

Hyatt Regency San Antonio on the River Walk
123 Losoya Street
San Antonio, TX 78205

GENERAL INFORMATION

REGISTRATION

Individuals are encouraged to register by mail as soon as possible to avoid delays on-site. Registration forms postmarked on or after April 3, 2006 and individuals registering on-site will be charged an additional $25.00 fee. A registration fee for spouses attending the meeting is being charged to offset a portion of the cost of the services which the Academy provides them. You must register to attend any portion of the meeting. To register, fill out the registration form, (available on the website) attach your payment in U.S. funds to American Academy of Oral & Maxillofacial Pathology (AAOMP), and mail both to:

AAOMP
214 N. Hale Street
Wheaton, IL 60187 U.S.A.
Toll Free: 888/552-2667 or 630/510-4552

Additional Office Information
Fax: 630/510-4501, Email: aaomp@b-online.com

Annual Meeting
April 22-26, 2006

MICROSCOPES AVAILABLE

Microscopes will be available for slide review and informal consultations in the CCA/Speaker Ready Room.
The Academy is once again sponsoring a Continued Competency Assurance program (CCA). The registration fee for members is $50 and $65 for non-members should be included with your registration form. In the past, the CCA was available for Diplomates only, but on a trial basis, it will be offered to all AAOMP members and meeting registrants at the San Antonio meeting in 2006.

The AAOMP CCA is in a self-assessment format. Upon arriving at the meeting, participants should pick up their CCA packet from the registration desk. Each packet will contain self-assessment questions relevant to the CCA materials provided at the meeting along with an AAOMP CCA Participation Document.

The CCA cases will be available for review in the microscope room. See the Schedule at a Glance for times and location. The cases are individually packaged with appropriate histories, clinical photographs, radiographs and glass slides. Each of the 20 cases should be reviewed individually and completely and returned to their container. Upon completion of the CCA, each registrant should return the Participation Document to the registration desk. At that time, the diagnoses, discussion and references will be supplied for all cases presented.

The American Board of Oral and Maxillofacial Pathology will be provided with the list of completed participants.

Abstracts will be available to review on the website at www.aaomp.org
If you need a hard copy, please contact the office.
MEETING PROGRAM AND SCHEDULE

Friday, April 21, 2006

12:00 pm
Executive Council Meeting

Saturday, April 22, 2006

8:00 am - 5:00 pm
Fellowship Examination and Fellowship Committee Meeting

8:30 am - 11:30 am
CE Program #1 (3 credits)
26th Annual AFIP Seminar
Robert D. Foss, CAPT, DC, USN
Stephen B. Williams, COL, DC, USA
Christopher G. Fielding, LTCOL, DC, USA
Jose E. Colon, DDS

The Armed Forces Institute of Pathology, in conjunction with the American Registry of Pathology, is an international reference center for pathology. An act of the United States Congress authorizes this Department of Defense agency and its 23 departments to render consultative opinions on challenging and interesting cases from military, federal and civilian pathologists worldwide. The Department of Oral and Maxillofacial Pathology maintains over 60,000 cases in the Registry of Oral and Maxillofacial Pathology. The staff of the department will present atypical, unusual or uncommon lesions from the head and neck region that have been accessioned through the registry. Emphasis will be placed on the histopathologic differential diagnosis, adjunctive special laboratory studies and the rationale used to arrive at a final diagnosis. The first 50 registrants will receive glass slides of the cases prior to the meeting. These slides need not be returned, however, these 50 attendees are strongly encouraged to submit their diagnoses for the cases. Diagnoses will be used as a framework to help guide the discussion. All attendees will receive a handout containing histories, diagnoses, discussion and references. A CD that contains the handout material as well as a number of representative images of each case is available for purchase following the meeting.

Objectives:
1. To review rare, unusual, or challenging cases from the Registry of Oral and Maxillofacial Pathology.
2. To discuss the development of a clinical and histopathologic differential diagnosis.
3. To provide the rationale for the use and application of adjunctive histopathologic, immunohistochemical and molecular studies in challenging diagnostic scenarios.

1:00 pm - 5:00 pm
Symposium (4 credits)
John W. Hellstein, DDS, MS
Robert M. Howell, DDS
“Digital Imaging - Enhancing Oral Path Education”

The enabling goals of this symposium will be to familiarize the attendee with the capabilities of various digital photography hardware and software applications, the ultimate goal will be to enhance Microsoft PowerPoint® presentations for their lectures.

In the first hour, the capabilities of Adobe Photoshop CS2® will be covered. Topics will include: histogram balancing; differences between clinical images and photomicrographs; white point balancing of photomicrographs, batch processing and image archiving; use of the dodge tool; use of the burn tool; use of the heal and clone tools; use of layers; use of Photoshop actions; applying Photoshop® for research; both clinical and photomicrograph applications will be demonstrated; and emphasis on differences between images intended for print, the web and for PowerPoint®.

In the second hour, hardware overviews for digital photomicrography and clinical photography will be covered. Topics will include: setup and cost options for photomicroscopy, setup and cost options for clinical photography, limitations and benefits of the various setups, and how to optimize your digital imaging before the “picture” is taken.

In the third hour PowerPoint® tips and tricks will be presented. Topics will include: optimum image size and type of file for images; how PowerPoint® interacts with the Microsoft Word®, Excel® and Adobe Acrobat®; bringing tables from Word to PowerPoint®; use of external hyperlinks; use of internal hyperlinks; use of PowerPoint® for self-tutorials; and image deterioration in PowerPoint® over time.

Objectives:
At the end of the session the attendee will be able to:
1. Better understand the capability that Adobe Photoshop® provides to the oral pathologist.
2. Utilize slightly advanced and useful Photoshop® techniques such as the burn/dodge, heal and clone tools.
3. The advantages of layers will be appreciated by the attendee.
4. The attendee will be better at managing image retrieval and image archiving problems associated with digital
The ability to enhance images during the post-acquisition phase will be improved.
5. The attendee will better understand hardware capabilities and limitations associated with digital photomicroscopy.
6. The attendee will better understand hardware capabilities and limitations associated with digital photography.
7. The attendee will be able to creatively utilize PowerPoint® hyperlinks.
8. The attendee will be able to creatively utilize PowerPoint® hyperlinks.
9. The attendee will understand and be able to transfer high quality tables to PowerPoint®.
10. The attendee will be able to utilize hyperlinks to create self-paced PowerPoint® exams or tutorials.
11. The attendee will be able to utilize hyperlinks to modify lectures which only vary slightly from audience to audience without saving each presentation separately.
12. The attendee will be able to utilize hyperlinks which automatically update from the “web”

Software being demonstrated will be Adobe Photoshop CS2®, Microsoft Office 2003 Word®, Microsoft Office 2003 Excel®, Microsoft Office 2003 PowerPoint®, and Acrobat Reader 7.0®.

While many participants will have a different edition of the software demonstrated the instruction will be given so that all participants will garner desired skills or ideas from the symposium.

While individual laptops cannot be supplied, participants are encouraged to bring their own laptops with them to the symposium. These laptops should be loaded with above referenced software. Batteries should be fully charged though we will endeavor to have power cords available. To that end, attendees wishing to bring their own laptops to “follow along”, must inform us at least 30 days prior to the symposium so that we can attempt to provide sufficient power cords. Unfortunately, due to time constraints we will not be able to answer questions about other software editions at the symposium. A CD with example PowerPoint® presentations will be given each participant at the end of the symposium. A CD with example PowerPoint® presentations will be given each participant at the end of the symposium. In addition, before and after images will be provided on the CD with descriptions of how the figures were enhanced.

Objectives:
At the completion of this course, the participant will be able to:
1. Understand the genetics of drug metabolism so as to better predict potential drug interactions.
2. Understand the specific actions of antihypertensive medications and predict intraoral side effects they may cause.
3. Identify radiographic subtleties in the periodontal ligament space and correlate them with the resultant histopathology.
4. Clinically predict the histopathologic diagnosis of vesiculo-bullous diseases based on clinical appearance and manipulation of soft tissues.
5. Recommend appropriate biopsy techniques to those who submit cases to your pathology service.

8:30 am -11:30 am
CE Program #3 (3 credits)
Susan Hadley, MD
“Fungal infections of the mouth: who, what when, why”

This 3 hour course will review clinical presentations, histopathology, diagnostics, host characteristics and treatment options of fungal pathogens responsible for superficial and invasive disease in the mouth. Characteristic pathogens affecting immunocompromised hosts and those acquired within the community will be reviewed. New antifungal agents will be discussed in the twenty first century, dentists will assume the role of “Oral Physicians”. The Oral Medicine and Oral Pathology communities have already assumed this role. This course will cover some of the “oral medicine pearls” that translate well into oral pathology practice. The first part of this lecture will review the current guidelines for the management of hypertension that were published in May, 2003 (JNC-7) and will detail the genetics of drug metabolism, pathophysiology of hypertension, all of the major categories of antihypertensive medications and their pharmacologic actions, as well as the intraoral side effects caused by these medications. The second part of this course will present a number of radiographic and soft tissue pathology clinical cases that will highlight the management of patients taking multiple medications. The final section of this course will review the clinical work-up and biopsy techniques for patients with vesiculo-bullous diseases. Diagnostic and therapeutic modalities that can be utilized by the dental treatment team as well as current trends in oral diseases and their management will be addressed. Special attention will be given to the medical implications of these disorders. The format of this course will include case presentations; audience participation will be encouraged.

Sunday, April 23, 2006

8:30 am -11:30 am
CE Program #2 (3 credits)
Michael Siegel, DDS, MS
“Translational Oral Medicine”

The World Health Organization has predicted that, in
context of antifungal resistance, emerging pathogens and drug interactions. A treatment approach from the general Internist's and Infectious Disease specialist's view will be discussed with emphasis on approaching the infections utilizing the expertise of the dental and medical disciplines.

Brief self synopsis:
Dr. Susan Hadley is Associate Professor of Medicine at Tufts University School of Medicine and Vice-Chief of Clinical Infectious Diseases at Tufts-New England Medical Center, Boston, MA. Dr. Hadley’s area of clinical expertise is diagnosis research has focused on the development of a simple antifungal susceptibility screening test and emergence of antifungal resistance as well as clinical trials of new antifungal agents for invasive fungal infections.

Objectives:
On completion of this seminar, participants should be able to:
1. To review the clinical manifestations, histopathology, diagnosis and treatment of oral fungal disease including emerging pathogens.
2. To review advances in antifungal therapies and epidemiology of fungal resistance
3. To understand host characteristics, immuno-biology and treatment goals for specific infections
4. To review whom to call for help when encountering oral fungal infections and how to respond to a call for help.

8:30 am -11:30 am
CE Program #4 (3 credits)
Lester D.R. Thompson, MD
“Sinonasal Tract Slide Seminar”

A series of 10 cases involving mucosa, soft tissue, and lymphoid tissue of the sinonasal tract and nasopharynx will be discussed. Although approach will be placed on a practical approach to this diverse group of lesions, pertinent clinical, immunohistochemical, and molecular/genetic features of diagnostic or prognostic significance will also be highlighted.

A glass slide set will be sent to each participant of this course. These glass slides must be returned at the meeting site.

Objectives:
On completion of this seminar, participants should be able to:
1. Recognize a variety of lesions of the sinonasal tract and nasopharynx, formulate a differential diagnosis, and identify important histologic criteria to separate them
2. Select and integrate immunohistochemical, molecular and/or genetic procedures that aid in diagnosis or have prognostic significance
3. Understand their clinical behavior and be able to communicate effectively with clinicians about their management.

1:00 pm -4:00 pm - TIME CHANGED
CE Program #5 (3 credits)
David Wong, DMD, DMSC
“Emerging Technologies and Targets for Saliva Diagnostics”

There is a national initiative catalyzed by the National Institute of Dental & Craniofacial Research (NIDCR) to turn saliva diagnostics into a clinical reality. Currently seven engineering groups are spearheading the development of sensor technologies for the detection of virtually any analyte in saliva while three proteomic groups are actively deciphering all the proteins in human saliva. The convergence of these two research initiatives of the human salivary proteome to identify signatures of major human diseases and the developed saliva biosensors will present a totally non-invasive disease screening platform. Our profession will be first to benefit from these emerging technologies which should soon migrate into the medical diagnostic domain.

Objectives:
1. Saliva diagnostics - a national initiative
2. Emerging technologies for saliva diagnostics
3. Proteomic and genomic targets for saliva diagnostics
4. Saliva diagnostics in the clinical settings
5. The role of the saliva diagnostics for dentistry and oral & maxillofacial pathology.

2:00 pm -5:00 pm
CE Program #6 (3 credits)
Douglas R. Gnepp, MD
“Salivary Gland Pathology: A Potpourri of Selected, Challenging and Unusual Lesions”

This workshop presents 9 examples of salivary gland pathology. Histologic variation, potential diagnostic pitfalls and differential diagnosis of unusual variations of common lesions as well as recently described entities will be emphasized. Immunocytochemistry and electron microscopy will be used to supplement selected cases. Several cases will serve as a point of departure for a broader discussion of related topics. Audience participation is encouraged.

This course is designed for residents and oral pathologists who would like an in depth review of challenging salivary gland pathology. Digital images of the entire
H&E slide from each case will be available for participants to review before the conference (kindly provided by Bacus Laboratories, Inc.). In addition, a detailed handout will be provided.

**Objectives:**
1. Recognize unusual histologic variations of more common salivary gland tumors
2. Be more familiar with recently characterized salivary gland tumors.

2:00 pm - 5:00 pm  
**CE Program #7 (3 credits)**  
Peter M. Banks, MD  
“Lymphoproliferative Disorders of the Head and Neck”

Because of its exposure to environmental pathogens the upper aerodigestive tract and lymph nodes draining this region are among those most commonly sampled due to clinical suspicions of malignancy. Utilizing 12 selected cases, participants in this course will learn methods to avoid misinterpretation of reactive processes as malignancy, as well as the criteria for precise classification of lymphomas arising in this region. Particular emphasis will be placed on the question of when very small samples, including fine needle aspiration cytology, can be relied upon in rendering a definitive diagnosis. Entities include among the cases include Rosai-Dorfman disease, Langerhans histiocytosis, Castleman disease, nasal type NK/T-cell lymphoma, Burkitt lymphoma, follicular lymphoma, as well as both nodular lymphocyte predominance and classical types of Hodgkin lymphoma.

Image scans allowing computer virtual microscopy of the cases will be distributed to registrants to retain for their own educational purposes.

**Objectives:**  
Registrants will:
1. Retain illustrative scan images from 12 cases representing diverse benign and neoplastic entities encountered in biopsies from this region.
2. Become familiar with the WHO classification of hematopoietic-hematologic neoplasms, in particular as it relates to tumors arising in this anatomic region.
3. Become aware of the benign proliferations which most commonly mimic lymphomas, both clinically and microscopically.

5:30 pm  
Address by ADA President Brandjord

Continued on pg 8
Continued from pg 7

8:00 am –11:30 am
Essay II

11:30 pm - 1:00 pm
Past President’s Lunch

1:00 pm –5:00 pm
Founders Memorial Seminar (4 credits)
Margaret Brandwein-Gensler, MD
“Otolaryngologic Pathology”

The participants will be supplied with a combination of glass slides and CD images. After participation in this seminar, the pathologist will be acquainted with the differential diagnosis and the prognostic significance of various sinonasal “small blue cell” and sinonasal “clear cell” neoplasia, grading criteria and prognostic significance for various common and uncommon salivary neoplasia, recognize another newly reported salivary entity, and gain experience in oral squamous cell carcinoma risk assessment.

Objectives:
1. be acquainted with the differential diagnosis and the prognostic significance of various sinonasal “small blue cell” and sinonasal “clear cell” neoplasia, grad-

ing criteria and prognostic significance for various common and uncommon salivary neoplasia
2. recognize another newly reported salivary entity
3. gain experience in oral squamous cell carcinoma risk assessment.

6:00 pm - 9:00 pm
President’s Reception & Banquet

9:00 pm - 11:00 pm
Dance with the Band - open to all members of the Academy and their spouses.

Wednesday, April 26, 2006

9:00 pm - 11:00 am
Clinical Pathology Conference (2 credits)
